Tilis butterfly valves

DN 50 up to 300 mm

Technical manual

Description

By concentrating the technologies and by integrating technical solutions of the highest levels, Socia fulfils its ambition:

- competitiveness of a standard range,
- reliability,
- comprehensive range thanks to a multiplicity of solutions.

Tilis butterfly valves

DN 50 up to 300 mm

- For processes where hygiene is of the utmost importance, TILIS with PTFE coating (FDA approved), and EPR liner, together with stainless steel 316 disc is highly recommended.
- Vertical and horizontal operating position.
- Two part body for easy dismounting and replacement of the liner.
- Interchangeable disc and liner.
- Body in ductile iron JS1030 and stainless steel
- Body epoxy coated 80µm colour blue RAL

5017 (a lot of other coatings on option, please ask our sales department)

• Wide choice of actuations.

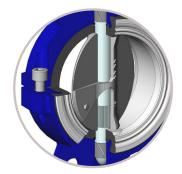

SAFETY

> Safety anti-ejection circlip keeps shaft in place

and allows easy maintenance

- > Safety reinforced by a secondary water tightness.
- > Spline driven one piece shaft connected to floating disc: high reliability of tightness and torque transmission in the long term.

PROTECTION AND RELIABILITY

- > High power transmission with robust grooved connection between the shaft and the disc.
- > Complete protection of the shaft and valve body from fluids.
- > Reliability of movements with selflubricating bearings.

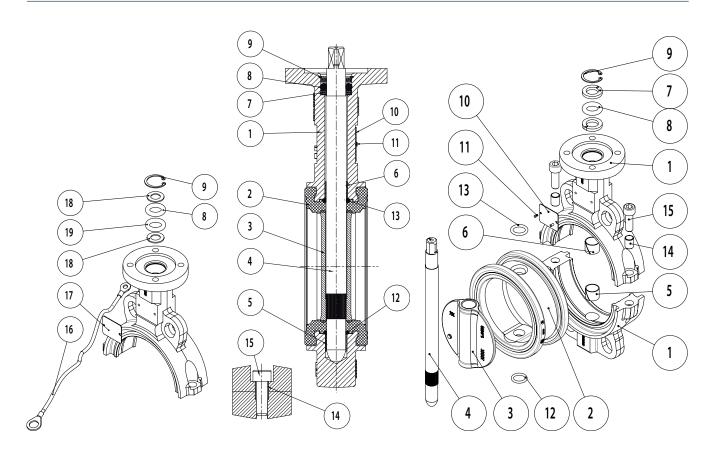

TRACEABILITY

>Identification and traceability ensured by riveted metal tag: see on page 13.

Normalisation

DESIGN

According to EN 593 and marking according to EN 19

ISO TOP CONNECTION FOR ACTUATIONS

According to EN ISO 5211

FACE TO FACE

According to 558-1 series 20

ISO 5752 series 20 API 609 table 2

TESTS

According to EN12266-1

Resistance and tightness of the body: test P11(1,5 x allowable operating pressure)

CONNECTING FLANGES see on page 13

According to

EN1092-1 and EN1092-2

JIS B2238 and JIS B2239

ASME/ANSI B16.5

BS10-d and BS10-e

Tightness of the seat: test P12 rate A (1,1 x allowable operating pressure)

According to EN12266-2

Anti-static design: test F21

EUROPEAN DIRECTIVES

Our butterfly valves are in accordance to the safety requirements of the following directives. :

· Directive 2014/68/UE: Equipments under pressure PED (Pressure Equipment Directive)

Applies to the design, manufacturing and the assessment of the conformity of pressure equipment, the maximum allowable pressure of which is 0.5 bar.

Pressure equipment for water supply, distribution, and disposal of water is excluded. Depending on the type of pressure equipment, maximum allowable temperature (PS), DN, physical nature of the fluid (liquid, gas or vapour) and the degree of danger of the fluid (group1/2)*, the directive classifies this same equipment into different categories (article 3.3, I, II, III, IV), required for the assessment of conformity with CE marking. The equipment defined in article 3.3 of the directive must not bear the CE marking.

(*) Group 1 : according to rule CE 1272/2008.

Group 2: all other fluids.

Important notice: the indicated pressure for the different categories of fluids (L1/L2/G1/G2) is under no condition a guarantee of use. Therefore, it is essential to validate the use of products under given operating conditions. Socla is not responsible for alteration of the products to working conditions not previously specified by the customer.

Directive 2014/34/UE: ATEX (EXplosive ATmospheres)

This directive is only applicable for the following atmospheric conditions: $-20^{\circ}\text{C} < T < +60^{\circ}\text{C}$; 0,8 bar $\leq P \leq 1,2$ bar.

In this risk analysis, the fluid which passes through the valve is not taken into account. It is under the responsibility of the user to take into consideration the risks generated by the fluid like: heating of the surface of the valve, internal chocks generated by granulates, wave of chocks due to the installation (water hammering), or the risks due to foreign bodies which are inside the installation.

Classification of the bare shaft valve : The marking of the bare shaft valve is : $\langle \mathcal{E}_{\mathbf{X}} \rangle$ II 2 DG.

Classification of the set valve + actuation :

- Valve with a hand lever: The use of hand levers produced by Social within a ATEX area do not represent additional risks. The
 valve with a hand lever is in conformity to the marking: \(\xi_{\text{X}}\) II 2 DG.
- Valve with other actuations: The classification of the valve + actuation supplied by Socla is similar to the lowest classification of the components which composed the assembly.

No additional marking will be used to indicate the classification of the assembly.

If a single element of the combination does not carry the ATEX mark, then the entire valve/control combination does not conform to the ATEX directive The classification of the equipment allows its use in a determinate area; an use in another area is under the responsibility of the user.

Directive 2006/42/CE: Machinery Directive

In its Appendix I it sets a certain number of Essential Health and Safety Requirements which must be met. It applies to motorised butterfly valves, (with electric, pneumatic or hydraulic actuators). According to this Directive, these sets are "Partly Completed Machineries" designed for being integrated into a machine.

"Partly Completed Machinery" means an assembly which is almost machinery but which cannot in itself perform a specific application. A drive system is partly completed machinery. Partly completed machinery is only intended to be incorporated into or assembled with other machinery or other partly completed machinery or equipment, thereby forming machinery to which this Directive applies.

An instruction notice specifying the installation characteristics and the commission of the Tilis is added to every product; It is available on our web site www.socla.com or on request by our sales department.

Pressure

DIRECTIVE 2014/68/UE EQUIPMENTS UNDER PRESSURE

Products manufactured in conformity with the requirements of the directive, according to pressure, DN and fluid (see on the precedent page).

LINERS	DN mm	Cat.	MOUNTING	PFA		F	PS	
LINENS	DIN IIIIII	Cat.	MOONTING	PFA	L1	L2	G1	G2
	50 to 100		Flanges	10	10	10	10	10
	30 10 100	'	End of line	6	6	6		6
EPR/PTFE	125 & 150	Ш	Flanges	10	10	10	10	10
EPR/PIFE	123 & 130	II	End of line	6	6	6		6
	200 to 300	Ш	Flanges	6	6	6	6	6
	200 10 300	"	End of line	4	4	4		4

For Class II valves, the minimum body temperature is:

- 10 for ductile iron 5.3106 EN-GJS-400-15)

NOTE: Butterfly valves of category II used as «end of line», please consult us.

PS: Maximum allowable pressure (in bar) according to Directive 2014/68/UE

PFA: Allowable operating pressure (in bar) for supply, distribution and disposal of water.

Applications

- Industrial applications such as: Food fluids, mineral water, cosmetic process, detergents, fertilisers and weed-killers.
- On request, we can supply butterfly valves type TILIS conformed to the directive 2014/34/UE (products or systems used in a explosive atmosphere).

Installation

General remarks:

For safety reasons, the installation must take place under the supervision of authorised people taking account of local safety instructions and advice.

The handling of butterfly valves and their controls must be done by staff trained in all technical aspects of their operation.

Before installation the pipes must be depressurised and purged (empty of its fluid) in order to avoid any danger to the operator.

The pipe work must be correctly aligned so that no extra stress is exerted on the valve casing.

In ATEX zone, check that the pipes are connected to the earth. Do not use insulating pipes (PVC....)

Check the compatibility of the connection flanges against the operating pressure: the PN number of the flanges must be greater or equal to the operating pressure.

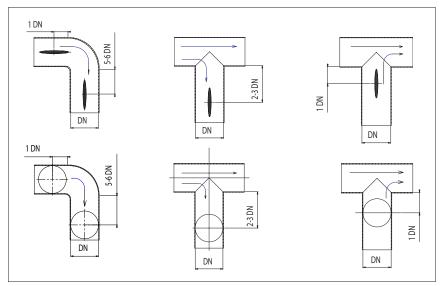

The valve is a machined piece of equipment and must not be used to prise apart the flanges.

An instruction notice specifying the installation characteristics and the commission of the Tilis is added to every product when the ATEX version is specified;. It is available on our web site www.socla.com or on request by our sales department.

Installation conditions:

It is recommended that the distances mentioned below be respected in order to prolong the life time of the valve.

Mounting the valve close to pipe work junctions places it in turbulent zones which increase its wear.

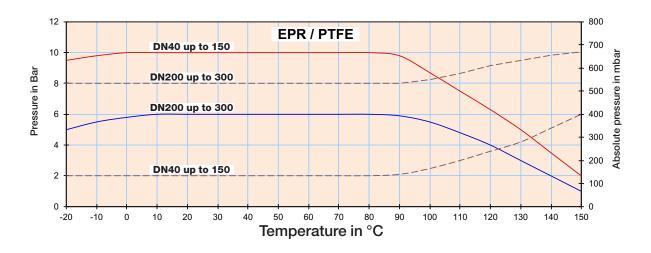

Functionning characteristics

Torque values

DN	50	65	80	100	125	150	200	250	300
Torques for water - Nm	50	61	70	120	130	165	350	410	650

NOTE: Applications: liquids, one actuation per month, torque value after 10 actuations, PS 10 up to DN150, PS 6 for DN200 to 300.

300	60	219	500	989	1736	2770	4097	5118	5635

Kv = volume of water in m3/h through a valve at a preset opening stage and under a head loss of 1 bar.

The butterfly valve is not the best product for regulating Nevertheless, the Tilis butterfly valve can be used to regulate by an opening stage between 30° and 90° .

A regulation in the opening stage lower than 30° is not advisable because of over speed, cavitation effect, which could damage prematurely the valve.

The maximum flow velocity of the fluid through the valve must not exceed:

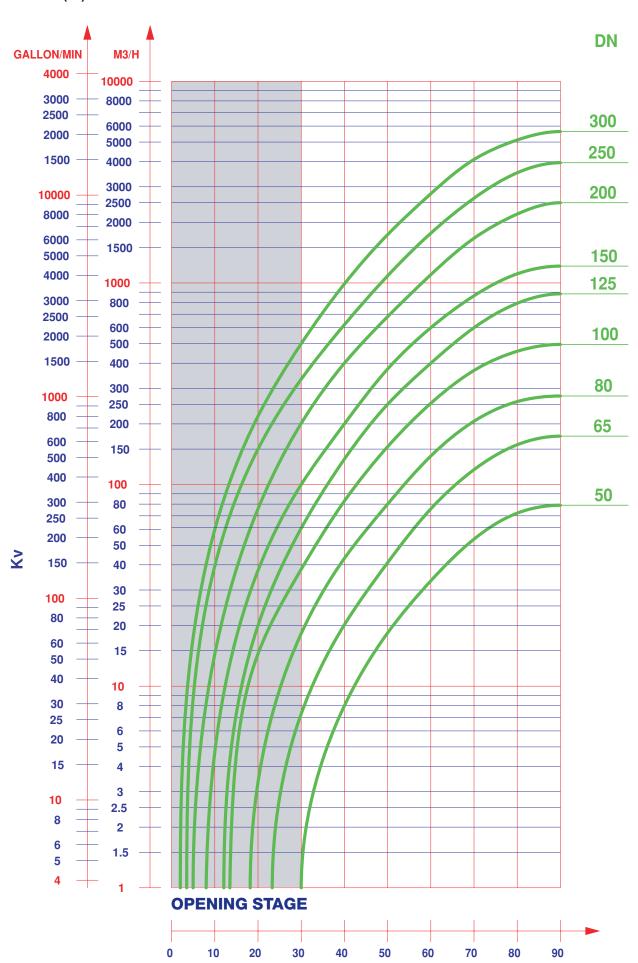

• 3 m/s for liquid fluids. Between 3 and 5m/s, the use of the Tilis butterfly valve is possible, but the phenomena of cavitation,

noise, vibration and water hammering increase.

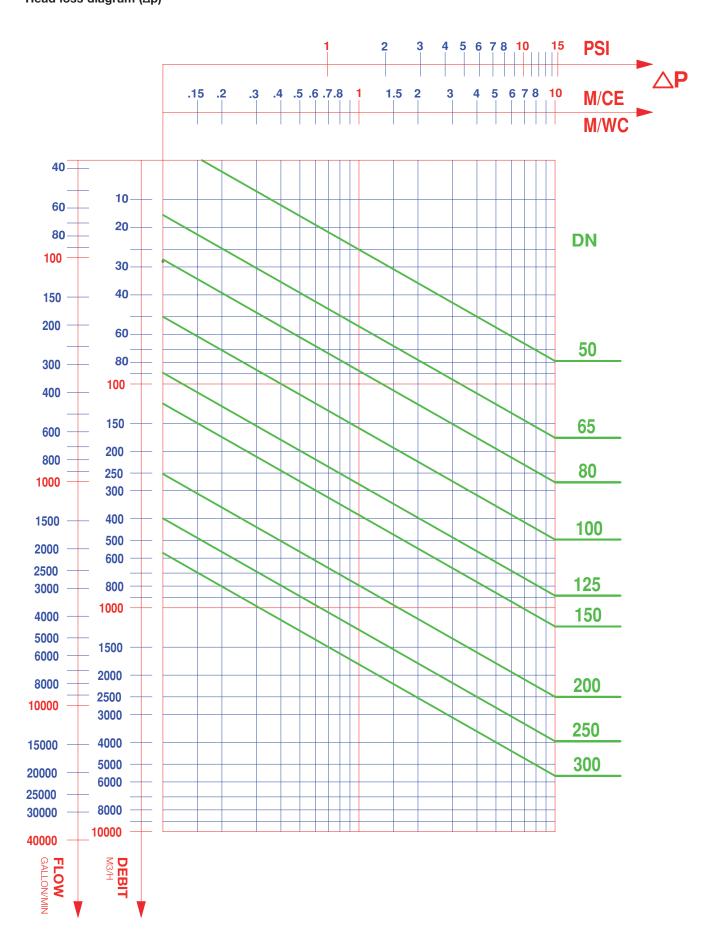

- 20m/s for gas. Between 20 and 25m/s, the use of the Tilis butterfly valve is possible, but the phenomena of cavitation, noise, vibration and water hammering increase.
- · for gas and and pulverulent or paste fluids : please consult us.

⁽¹⁾ Possible mounting if the butterfly valve is inclined at 22,5° $\,$

Attention: the body of the Tilis butterfly valve is not a multi-connection body (connection to many flanges of differents sizes). Generally, every connection relates to a different reference of finished products.

End of line mounting and downstream removing

The end of line mounting and the downstream removing, at ambient temperature, of the Tilis butterfly valve is limited to the pressure mentioned on page 5 according to the PED directive 2014/68/UE.

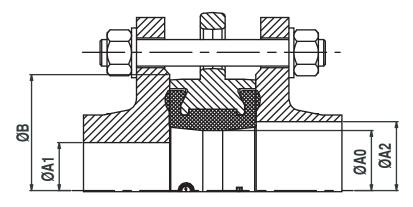

These mountings are only possible on bodies with tapped lugs.

Type of flange

The Tilis butterfly valve has been designed to be mounted on normal standard flanges. Only standard flanges type 11, 21 and 34 according to EN 1092 are quite compatible.

For other types of flanges, refer to the table below. Non appropriate connections will cancel our guarantee.

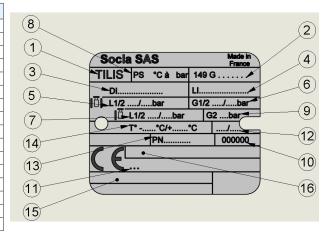

D	N	Ø A0	Ø A1 mini	Ø A2 maxi	Ø B mini
mm	,,	mm	mm	mm	mm
50	2	50	36	59	90
65	2 1/2	65	54	74	110
80	3	80	73	88	128
100	4	100	93	116	148
125	5	125	119	143	178
150	6	150	146	166	202
200	8	200	196	224	258
250	10	250	246	280	312
300	12	300	296	329	365

NOTE: The use of expansion seals, as well as the use of elastomer coated flanges, between the flange and the valve are strictly forbidden.

* WAFER TYPE BODY:

Assembly by rods : number of nuts and washer = $2 \times Number$ of rods (above)

Assembly by bolts: Number of nuts = Number of screws (above) and number of washer = 2 x Number of nuts

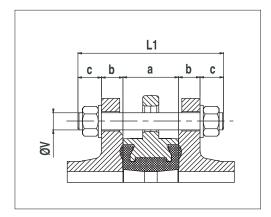

* LUG TYPE BODY

Assembly by screws : Number of screw per face (above) and number of washer is the same

** ASME / ANSI B16.5 CLASS 150 : ØV UNC THREADING IN INCH ; FOR METRIC THREADING, PLEASE CONSULT US.

Bolts and nuts

For wafer type body; assembly by rods:

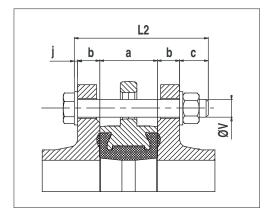

$$L1 = a + 2(b+c)$$

L1 = I minimum length of rods

a = width of the butterfly valve

b = thickness of the flange (customer)

c = thickness of washer + thickness of nut + exceeding length of the rod.

For wafer type body; assembly by bolts:

$$L2 = a + 2b + c + j$$

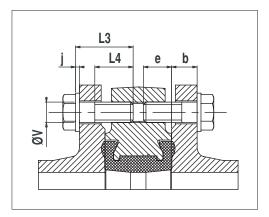

L2 = minimum length of rods

a = width of the butterfly valve

b = thickness of the flange (customer)

c = thickness of washer + thickness of nut + exceeding length of the rod

= thickness of washer

For lug type body; assembly by screws:

$$L3 \le b + e + j$$
 with $L4 \ge L3 - (b + j)$

L3 = maximum length under head of screw

L4 = minimum length of the threading of the screw

a = width of the butterfly valve

b = thickness of the flange (customer)

e = maxi depth of screw

j = thickness of washer

Actuations

Find below the different standard assembly combinations.

For any other information, please ask our technical Department.

For other options, please consult us.
