

9 BIS

Pressure reducing valves type REDUNEUF

Desbordes

Technical Data Sheet

Description

The Desbordes pressure reducing valves 9 BIS bodies are made of bronze. Due to their design, they are not affected by scale or dirt and do not need any maintenance. They can be fitted on compressed air, neutral gases and fuel oil at ambient temperature circuits. For these cases of applications consult us.

- Control and maintain the downstream pressure at an adjustable reduced value, whether there is a flow or not
- Keep an outlet pressure at a constant value, even by variation of the upstream pressure (the downstream pressure cannot vary more than 10% of the variation of the upstream pressure, according to the Standard)
- Guarantee a high flow rate at a constant outlet pressure because of low head loss
- Pre-set at 3 bar
- With 1/4" plugs on both sides to allow pressure gauge connection

Important notice :

L1, L2, G1 and G2 correspond to liquids/gas classified into degree of danger according to the Pressure Equipment Directive (PED). The article 4.3 applies to equipments with no CE marking.

Technical features

Operating temperature	Mini. : -10 °C / Maxi. in permanent service : 80 °C
Permissible operating pressure (PFA) in water	See table above
Maximum permissible pressure (PS) other mediums	See table above
Connection	Femelle/femelle, gaz cylindrique G (BSP)
Gauge connection	1/4"
Mediums	Water, other mediums : consult us

Approvals

ACS 

International construction Standards :

Pressure reducing valves EN 1567
Thread connection NF EN ISO 228

Application

Supply of housing developments, collective housing.

Installation

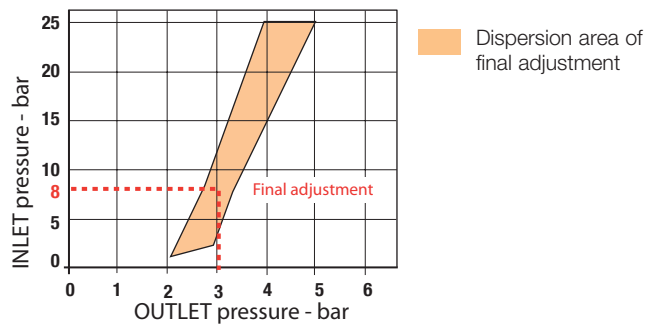

In domestic water supply, the DESBORDES reducing valves are fitted just after the water meter and thus protect the whole installation.

If there is a frost risk, they should be drained.

They can be fitted in any position (horizontal, upside down, fluid ascending or reversed and inclined) but the direction of flow indicated by the engraved arrow on the valve body, must be respected.

Operation

9 BIS - Final adjustment of pressure

Acoustic level :

DS value Lap in dB(A). The higher the DS is, the quieter the machine/apparatus will be : Our pressure reducing valves are very silent.

DN	Lap values
1/2	10 dB(A) up to 0,18 l/s
3/4	16 dB(A) up to 0,32 l/s
1	20 dB(A) up to 0,57 l/s

Flow

 Flow at the velocity used in the Standard (2 m/s)

 Maximum flow, at 0 outlet pressure, for upstream pressure of 8 bar

Kv : Flow in m³/h when the output pressure becomes 1 bar lower than its zero flow setting

Sizing

DN	D		A	B	E	G
